

### Overview

The Mobilescape 5000 is the market's first wireless handheld payment processing solution that accepts credit cards and paper checks. A key component of the Mobilescape 5000 is our patented optical scanner that is able to read the check's "MICR" (Magnetic Ink Character Recognition) number line as the check is swiped by hand. While the Mobilescape 5000 can compensate for a certain amount of "jerkiness" and speed variations during the swipe, we recommend that you follow these simple steps to ensure the best results.

- With the check facing you, grip the top edge of the check.

- Place the left edge of the check so that it rests on the bottom of the groove.

- Keep the check level and slide it from right to left with a smooth, even motion.
- Try a couple of varying speeds when swiping.

- Do not "scoop" the check up after you've pulled it through the groove. Keep it level as you slide the check all the way through.
- You'll get the hang of the right speed the more times you swipe a check.

Be sure to check out our training website at [www.mobilescape.com/support/training/index.htm](http://www.mobilescape.com/support/training/index.htm) for online training presentations, videos and information about our weekly training conference call.

If you continue to have problems scanning a check, please contact our Mobilescape Helpline at 1-866-414-5600.
